SmartSoft Tutorial Lesson 2:

What is this lesson about?

- we guide you through the first steps to use RobotinoXT in combination with the MDSD Toolchain
 - the effort is fairly low since we provide a VMware installation of all required packages
 - due to the VMware image, there is no need to modify the current settings of your computer
 - due to the VMware image, there is no danger to mess up something and to get stuck with a broken configuration since you can always go back to our original VMware image
 - you can use the VMware image on your preferred operating system
- we guide you through the necessary steps to update your RobotinoXT in order to use the SmartRobotinoBaseServer component
 - you get a step by step instruction how to update RobotinoXT to the new API2
- Example: Robotino Joystick Navigation
 - simple usage of the deployment to control RobotinoXT via a joystick
 - set of off-the-shelf software components for joystick navigation
 - applied example to illustrate how you can compose complex systems out of prebuild components
 - the generation of the deployment used in this example is demonstrated in <http://youtu.be/-ei8KNR5534>

SmartSoft Tutorial Lesson 2:

What skills do you acquire in this lesson?

- RobotinoXT Deployment

YouTube DE

SmartMDS for RobotinoXT

Hochschule Ulm

Due to the extensibility of SmartMDS it is now possible to simply use the whole spectrum of SmartMDS for the RobotinoXT platform. This opens an immense new field of applications for RobotinoXT.

SmartSoft Tutorial Lesson 2:

What skills do you acquire in this lesson?

- **Outline of Tutorial Lesson 2**

- Introduction:

- Part 1: The VMware Image:

- The system requirements and how to use the VMware with the latest SmartSoft virtual machine are described in lesson 1 part 1

- (see <http://smart-robotics.sourceforge.net/tutorials.php>)

- Example: Robotino Joystick Navigation

- Part 2: Prepare RobotinoXT

- Part 3: Using Robotino Joystick Navigation Deployment

SmartSoft Tutorial Lesson 2:

Part 2: Prepare RobotinoXT

- **Update RobotinoXT packages**
 - update RobotinoXT to API2

- **You will learn**
 - how to delete the Openrobotino API and install the new API2

- **Description of the Example:**
 - API2
 - Typically the old openrobotino API is installed on Robotino's CF card image
 - The SmartRobotinoBaseServer uses the new RobotinoXT API2 v0.5.0
 - To use SmartRobotinoBaseServer you have to delete the old API and replace it with the new one

SmartSoft Tutorial Lesson 2:

Part 2: Prepare RobotinoXT

RobotinoXT system information:

- CF card image v2.4 (factory settings)
- yet to be installed API2 v0.5.0

How to remove the old API:

- to connect under Linux, open a terminal and type :

```
ssh -X robotino@<ip-address>
```

- delete old API packages:

```
sudo dpkg -r robview2
```

```
sudo dpkg -r openrobotino2
```

```
sudo dpkg -r openrobotino1
```

```

^  v  x  robotino@robotino: ~/DeployRobotinoJoystick
File Edit View Terminal Help
hoerger@c26-09-zafh:~$ ssh -X robotino@192.168.31.124
robotino@192.168.31.124's password:
Linux robotino 2.6.32.11.robotino-rtai-3.8.1-gcc-4.3 #4 Tue Nov 13 11:42:23 CET 2012 i586

The programs included with the Ubuntu system are free software;
the exact distribution terms for each program are described in the
individual files in /usr/share/doc/*/copyright.

Ubuntu comes with ABSOLUTELY NO WARRANTY, to the extent permitted by
applicable law.

Last login: Wed Nov 28 12:33:20 2012 from c26-07-zafh.zafh.informatik.hs-ulm.de
robotino@robotino:~$ cd DeployRobotinoJoystick/
robotino@robotino:~/DeployRobotinoJoystick$ ls
deployRobotinoJoystick.sh  smartJoystickServer  SmartRobotinoBaseServer.ini
smartJoystickNavigation  SmartJoystickServer.ini
SmartJoystickNavigation.ini  smartRobotinoBaseServer
robotino@robotino:~/DeployRobotinoJoystick$ ./deployRobotinoJoystick.sh start

```

SmartSoft Tutorial Lesson 2:

Part 2: Prepare RobotinoXT

How to download and unpack the necessary packages:

- download the packages in a directory of your choice:
 - type directly on RobotinoXT (internet connection required):

```
wget http://doc.openrobotino.org/download/packages/i386/rec-rpc-qt4.5.0_1.3.3_i386.deb
```

```
wget http://doc.openrobotino.org/download/packages/i386/robotino-common_0.5.0_i386.deb
```

```
wget http://doc.openrobotino.org/download/packages/i386/robotino-daemons_0.5.0_i386.deb
```

```
wget http://doc.openrobotino.org/download/packages/i386/robotino-api2_0.5.0_i386.deb
```

- or download the packages to your PC and transfer them to RobotinoXT

Note: *Version 0.5.0 is required in order to function properly.*

- unpack the files:

```
sudo dpkg -i rec-rpc-qt4.5.0_1.3.3_i386.deb
```

```
sudo dpkg -i robotino-common_0.5.0_i386.deb
```

```
sudo dpkg -i robotino-daemons_0.5.0_i386.deb
```

```
sudo dpkg -i robotino-api2_0.5.0_i386.deb
```

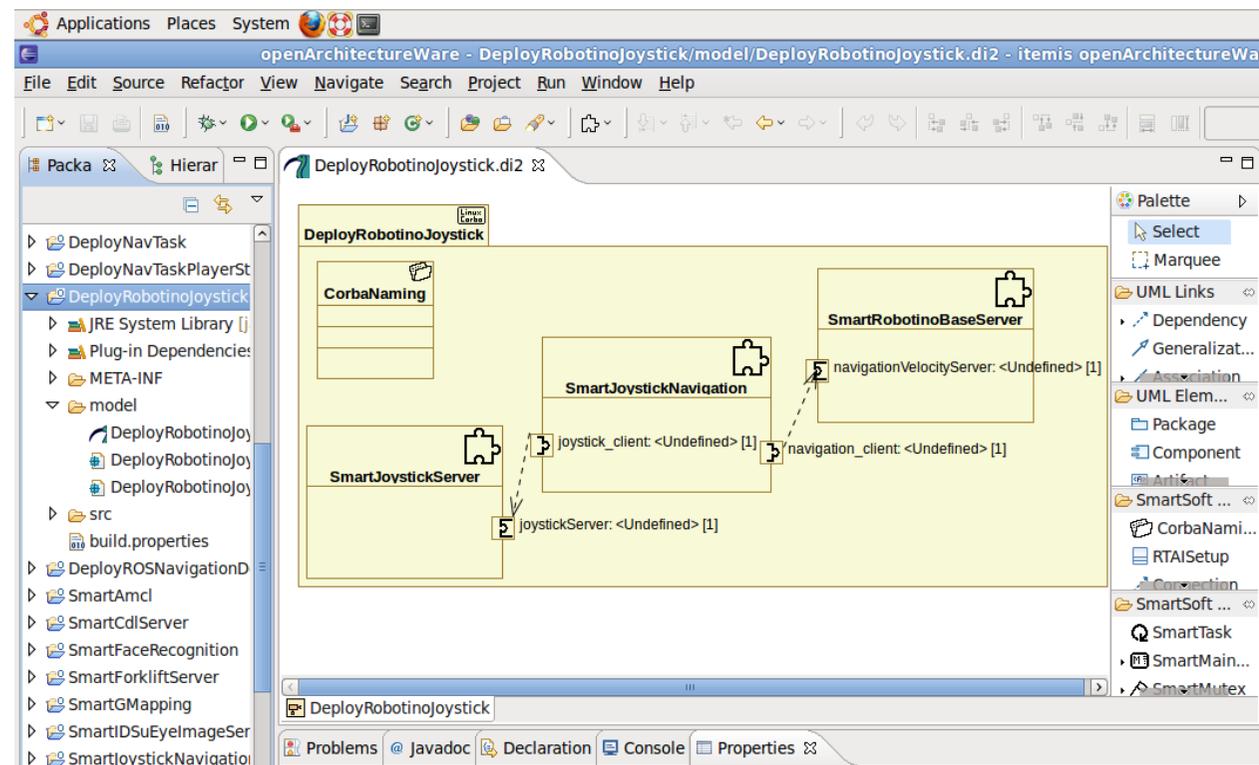

- **Note:** For more possibilities to update Robotino see
(http://wiki.openrobotino.org/index.php?title=API2_install_daemons)

SmartSoft Tutorial Lesson 2:

Part 3: Using Robotino Joystick Navigation Deployment

- **Robotino Joystick Navigation**
 - simple control of RobotinoXT with a joystick
 - use of a already existing deployment
- **You will learn**
 - how to configure and run an already existing deployment with the SmartSoft MDSD Toolchain
- **Description of the Example:**
 - in this example we run the components of the deployment in the virtual machine and control RobotinoXT via a network connection

SmartSoft Tutorial Lesson 2:

Part 3: Using Robotino Joystick Navigation Deployment

- **Configure SmartRobotinoBaseServer**

- change the IP-Address of RobotinoXT in SmartRobotinoBaseServer.ini

- on your virtual machine go to :

- ~/SOFTWARE/smartsoft/src/deployments/DeployRobotinoJoystick/src*

- open the file

- SmartRobotinoBaseServer.ini*

- and change the parameter

- daemonIP*

- to the address RobotinoXT has in your network

SmartSoft Tutorial Lesson 2:

Part 3: Using Robotino Joystick Navigation Deployment

■ Simple Joystick Navigation

- connect your joystick to the PC your virtual machine is running on (make sure the VM recognizes the joystick)
- the components are started by executing a start script
 - (this script is automatically generated by the toolchain's generation process, see lesson 1 part 4)
 - open a terminal in the VM
 - » *cd ~/SOFTWARE/smartsoft/src/deployments/DeployRobotinoJoystick/src*
 - » *./deployRobotinoJoystick.sh start*
- now, all components are being started
- next, you can control the robot with your joystick
- to stop all components, use the following command in the terminal from which you started all the components:
 - » *./deployRobotinoJoystick.sh stop*

SmartSoft Tutorial Lesson 2:

Part 3: Laser Obstacle Avoid / Real-World

Important Hint:

It is possible to deploy the components to RobotinoXT and run them locally, therefore SmartSoft needs to be installed on RobotinoXT.

- For installation instruction of SmartSoft see
 - <http://smart-robotics.sourceforge.net/corbaSmartSoft/install.php>
- The target IP-address needs to be changed to Robotino's and the Deploy Type of the DeployRobotinoJoystick project needs to be set to remote (see **3:33** <http://youtu.be/-ei8KNR5534>)
- The *daemonIP* in *SmartRobotinoBaseServer.ini* must be changed to **127.0.1.1**
 - you find SmartRobotinoBaseServer.ini on RobotinoXT in the directory specified in the project settings (see **3:57** <http://youtu.be/-ei8KNR5534>)

SmartSoft Tutorial Lesson 2:

Where to find more information?

- **SmartSoft framework and SmartSoft MDSD Toolchain:**
 - <http://smart-robotics.sourceforge.net>
 - <http://smart-robotics.sourceforge.net/mdsdSmartSoft/>

- **Description of available components:**
 - <http://smart-robotics.sourceforge.net/corbaSmartSoft/components.php>
 - in particular:
 - SmartRobotinoBaseServer
 - SmartJoystickServer
 - SmartJoystickNavigation

- **SmartSoft Doxygen documentation:**
 - <http://smart-robotics.sourceforge.net/corbaSmartSoft/doxygen/index.php>
 - in particular: Communication Objects
 - CommJoystick
 - CommNavigationVelocity
